PORTFOLIO DESCRIPTION AND INVESTMENT OBJECTIVE

This multi-asset class portfolio invests in equities, bonds, money market instruments and property, both locally and offshore. The portfolio will aim for long-term capital growth. However, a higher exposure to growth assets (equities and properties) is likely to lead to higher volatility over the short term. Investment performance will be driven by active stock picking and asset allocation. This portfolio may have a maximum effective equity exposure (including international equity) of up to 75% and a maximum effective property exposure (including international property) of up to 25% of the market value of the portfolio. Total allowable offshore exposure is 30%.

YOUR PERSONAL BALANCED PORTFOLIO

The SPW Balanced Portfolio is constructed by the investment team based on an intensive and rigorous investment process. The model portfolio acts as a guide to your portfolio manager in customising your personal portfolio to suit your individual requirements. It is important to note that the performance on this fact sheet is based on the model portfolio and the performance of your portfolio may vary depending on the level of deviation from the model portfolio and the fees charged.

WHY SELECT A PERSONAL PORTFOLIO

A personal portfolio is suitable to more discerning investors who might have unique factors to consider during the investment process. With a personal portfolio, your investment can be tailored to your unique requirements. You will have the benefit of more direct access to your portfolio manager. Your portfolio will not be affected by the cash investment and withdrawals of other investors.

QUARTERLY PORTFOLIO MANAGER'S COMMENTS

The third quarter of 2023 was a weak period for most markets. This was driven mainly by the realisation by market participants that central bank interest rates would likely have to remain higher for longer than previously expected. A sharp rise in oil prices as Saudia Arabia and Russia extended their production cuts deteriorated the inflation outlook, while a growing focus on persistent budget deficits, including a US credit rating downgrade by Fitch, put further upward pressure on real interest rates.

This provided the backdrop for weaker equity as well as bond prices - not a great environment for multi-asset portfolios. Developed market equities, as measured by the MSCI World Index, declined 3.5% in US dollar terms, while global bonds fell 3.6%. Rate-sensitive sectors such as consumer staples (-6.3%), global listed property (-6.1%) and technology (-6.0%) underperformed. The energy sector was the standout performer benefitting from the higher oil price, rising 11.5% during the quarter.

The US dollar strengthened against most major currencies - the US Dollar Index gained 3.2% during the quarter. This was supported by the rise in real yields, putting pressure on the gold price, which fell 4.9%. South African equities, as measured by the FTSE/JSE All Share Index, declined 3.5% in rand terms over the quarter. Gold and platinum mining shares were particularly weak while Sasol gained on the higher oil price. Bonds had another negative quarter as yields continued their relentless march higher - the FTSE/JSE All Bond Index lost 0.3%. Cash returned 2.1% while local listed property lost 1.0%. The rand ended the quarter broadly unchanged from the previous one versus the US dollar.

The SPW Balanced portfolio delivered a return of 15.8% for the 12 months to the end of September, outperforming the peer group average by 273 basis points. Outperformance was driven by active asset allocation and alpha from local equity selection. The one-year performance has put the portfolio on the 87th percentile against competitors. The portfolio achieved a 77th percentile position versus peers over 10 years. During the quarter we increased the diversification of the portfolio by adding exposure to select South African hedge funds and AngloGold Ashanti.
